CONTINUOUS ENHANCEMENT SUBSCRIPTION

Protecting your software investment

Software investment protection. Continuous improvement. Maintenance releases. Flexible delivery. Latest, greatest features. Preferred pricing on support and training. Special promotional pricing. The TRAVERSE Continuous Enhancement Subscription entitles you to any major releases occurring within your subscription period and it also ensures continuous improvement of your TRAVERSE software.

Because technology is moving forward at an astounding rate, software that was purchased just a few years ago is now obsolete and will not operate on the latest hardware. Newer versions of operating systems are not compatible with some of the older releases of your software products. The Continuous Enhancement Subscription can help to protect your software investment. You can be assured that your business will be able to take full advantage of leading edge technology as it becomes available.

The TRAVERSE Continuous Enhancement Subscription allows you the option of when to upgrade. Your business can benefit from new features and capabilities as they become available—on your schedule. If you stay current with the subscription, it costs significantly less in time and money than to let it lapse and have to pay to upgrade later.

Support and Training

By subscribing to the Continuous Enhancement Subscription, you will receive technical support from Open Systems, Inc. at the discounted rate of \$9.95 per minute. Users not current will pay \$14.95 per minute. In addition, you may purchase a \$500 prepaid support block, which reduces the rates to \$5.95 and \$9.95 respectively. You will also receive a 20% discount off the cost of any training classes we offer. Most important, you'll know your business is running with the most current, feature-rich software available. You'll have the best we have to offer at all times, and that means optimum performance. Bottom line: You will save time and money by taking advantage of the TRAVERSE Continuous Enhancement Subscription. It gives you the greatest return on your software investment: guaranteed value you can count on.

TRAVERSE Version 8.4/9.4 Enhancement Highlights:

TRAVERSE version 8.4/9.4 introduces two new applications:

Advanced Financial Analyst

Advanced Financial Analyst is a powerful financial reporting tool that automatically takes General Ledger data from TRAVERSE and imports it into Microsoft Excel, eliminating the need to manually transfer and massage data to get it into Excel.

Direct Deposit

Direct Deposit is an add-on to the TRAVERSE Payroll application that enables users to submit payroll deposits directly to the employee's bank accounts.

Also new to 8.4/9.4:

- You can add new menu items that run reports, functions or media files created in virtually any Windows productivity tool (this makes it possible to set up customized menus for each user).
- Excel Spreadsheets and PivotTables can be opened right from the TRAVERSE menu. This version of TRAVERSE comes with more than 70 professionally authored PivotTables to get you started. Simply select the PivotTable you want and Microsoft Excel takes it from there, filling the PivotTable with the data and creating the report. And, since the data has been copied into Excel, you can also perform "What if" analysis. Simply change the data in the spreadsheet and refresh; a new report with the adjusted data is created instantly. The actual data remains secure in the TRAVERSE database.
- Call Word documents from the TRAVERSE menu. Using Word's mail merge function, you can compose a form letter and use your TRAVERSE data to fill in the details and define the mailing list.
- A new two-step installation process minimizes the impact on any customization that's been done to TRAVERSE. Step one is to select the applications you want to update. Select only those that have not been modified. This allows unmodified applications to take advantage of all the new features and maintenance updates. Step two is to select the objects you wish to update in each of the modified applications. The installation program provides you with an explanation of the changes made to each object. Update only those objects which have not been modified. All modified applications can take advantage of most of the new features. The new update process greatly reduces the need for re-coding customized applications after an update. You can customize confidently, without worrying about how you will take advantage of the new features later.
